Foundations Upon Earth. Firm Earth.--Earth which has an angle of repose of at least 27 may be considered as firm, and for foundation purposes requires little preparation other than the excavation of a trench or pit, and making the surface receiving tbe masonry level. From Table II it is seen that sand, gravel, and damp clay are classed as firm soils; however, these may become so saturated with water that their augles of repose will become considerably less than 27, hence precautions must be taken against too much water by draining the ground in the immediate vicinity of the foundation. Particular care must be taken in the case of clay, or sand which will become a kind of quicksand when saturated with water. Before attempting to design a foundation, the character of the earth must be determined either by test excavations, borings, or from the experience of others. It often happens that from all surface indications the earth appears to be firm, but upon excavating it is found there is a stratum of semi-fluid mud or quicksand underneath; in such cases care must be taken to determine the minimum thickness of the...
